

IT-PS 2-FACTOR-LOCK: **YOUR EXTRA PROTECTION AGAINST CYBER ATTACKS AS EASY AS CAN BE**

- **Protect your core infrastructure with a globally unique system of safeguards**
- **Developed by the Austrian IT experts at IT-PS**
- **Manufacturer-agnostic for universal use**
- **Two-factor authentication**
- **Open Source: easy to use and cost-effective**

The threat is very real.

Emotet shows how cyber attacks can wreak havoc. This Trojan has caused massive system devastation in recent years. Companies lost all their company data, online backups, replications and snapshots within a very short time.

The problem: using redundant systems, clusters, and two-location approaches just isn't enough.

2-factor-lock is the solution.

The safer way to deal with this threat is two-factor authentication at administrator level. With 2-Factor-Lock, IT-PS has developed a globally unique safeguarding system for your core infrastructure that is simple, manufacturer-agnostic and universally applicable. Users are only granted access if they can present their password together with a token generated in real time.

Compatibility is key

2-Factor-Lock from IT-PS runs on all systems. It safeguards any IT infrastructure that enables remote access. We recommend integrating it into a central authentication service such as LDAP.

Freedom at low costs

As 2-Factor-Lock is based on open source components, you can continue to use and extend the solution as you wish, once it is installed. There are no license fees or maintenance costs.

Compact solution, huge benefit!

Safeguard your data – now! 2-Factor-Lock has everything you would expect from a comprehensive security solution:

- Easy to install
- High security
- Manufacturer-agnostic
- Cost-effective at an all-inclusive price
- Without additional costs or licences
