Security Works Best Bottom-Up

# Multifaktor 4 IBM i

**Threats are targeting the heart of your IT. Cyber attackers aim to corrupt your business-critical systems and steal your data.**

**IT-PS offers a simple yet reliable protection:**

**Multifaktor 4 IBM i.**

**Multifaktor 4 IBM i** is a purpose-designed multi-factor authentication system suitable for all IBM i systems. It runs directly on the IBM i platform and therefore works without needing to connect to an external service provider. This safeguards your system even when offline. Take your IT security to the next level at low costs and with minimal effort.

## FUNCTIONALITY:

- Multi-factor authentication solution for all IBM i systems
- Installs locally, directly on the IBM i system
- Compatible with common MFA apps such as Google- or MS-Authenticator

## BENEFITS:

- Protects the heart of your IT, business-critical applications, and data
- Optimizes access control
- Meets compliance regulations
- Requires no additional server or internet connections

## Multifaktor 4 IBM i

is available with different license models (subscription & purchase).
